Clearance Under Wood Floors

Interpretations of State and Local Building Codes 1994 Uniform Building Code: Chapter 23 Revision Date: January 1996 bnl 25-04/23-04

Page 1 of 3

## I. Clearance Under Wood Floors

Section 2317 of the Uniform Building Code indicates the requirements which are intended to protect wood frame construction against decay and termites.

A. When wood joists or the bottom of wood structural floors without joists are closer than 18 inches or when wood girders are closer than 12 inches to exposed ground in crawl spaces or unexcavated areas, the floor assembly shall be treated wood or wood of natural resistance to decay.

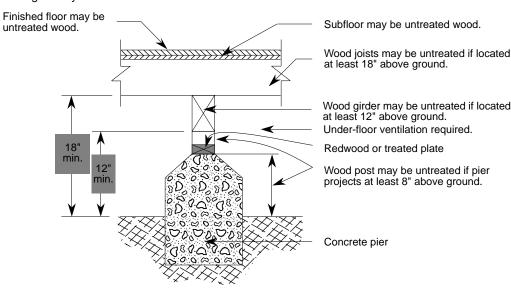

B. When the under-floor clearances, as noted in Item A above, are required or when plumbing cleanouts are installed in the under-floor area, under-floor access shall be provided. Section 2317.3 prescribes a minimum 18 inch by 24 inch access opening that is effectively screened or covered. The access opening and accessibility within the under-floor areas shall not be obstructed by pipes, ducts or similar obstructions.

## II. Examples

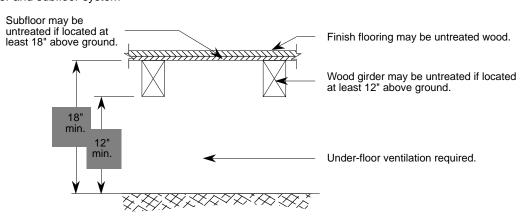

In the interest of uniform application of these requirements, the following examples may be used as design guides.
